

GRASSLANDS CLOVER RICH ECO TURF

Grasslands have pioneered the first clover rich turf rolls in the country.

Produced in collaboration with Germinal Amenity, the rolls combine Grasslands' own proven grass varieties with the climate smart clover, DoubleRoot, a world first hybrid cross of White Clover and Caucasian Clover.

The result is a highly durable turf with some remarkable qualities ...

If you think of clover as a weed

THINK AGAIN!

REDEFINING CLOVER ...

Drought Resistance: Clovers have deep roots, allowing them to withstand periods of drought better than traditional grass lawns.

Nitrogen Fixation: Clovers have the ability to fix nitrogen from the air into the soil, which helps improve soil fertility and reduces the need for synthetic fertilisers.

Low Maintenance: Our Clover Rich Eco Turf requires less frequent mowing, saving labour and lowering energy consumption.

Attracts Pollinators: Clover flowers attract bees and other pollinators, promoting biodiversity in the lawn ecosystem.

Environmental Benefits: Clovers demand less resources such as water, fertilisers and pesticides, thereby promoting a more eco-friendly lawn alternative.

Tolerance: Clover Rich Eco Turf is more shade resilient, more tolerant to foot traffic and more resistant to dog patching than a grass monoculture lawn.
