

GRASSLANDS

# SPECIES RICH TURF®

ONE TURF  
FOR ALL CONDITIONS

Creating a beautiful wildflower lawn  
shouldn't be complicated.

Traditional approaches require different products for different garden conditions - sunny areas, shaded spots, and damper locations - making the process both complex and expensive.

## THE SOLUTION

Our Species Rich Turf works everywhere - sunny slopes, shaded edges, SuDS areas. One product, one specification, one affordable price.

Field-grown rolls, mechanised production, delivered fresh.

## WHY IT WORKS

Extensive species mix naturally adapts to your garden.

80/20 grass/wildflower ratio provides durability with biodiversity.

Attracts bees, butterflies and other pollinators to support garden wildlife.

Easy-handling rolls, not awkward slabs.

No plastic reinforcement or imported growing mediums.

Instant results vs unpredictable seeding.

# GRASSLANDS' SPECIES RICH TURF®

| SEED SPECIES                                                        | GOOD FOR ALL AREAS | LOW GROWING | SHADE | WATER AREAS |
|---------------------------------------------------------------------|--------------------|-------------|-------|-------------|
| Bedstraw; Lady's (kg)<br>- Galium verum                             | X                  |             | X     |             |
| Bird's-foot-trefoil; Common (kg)<br>- Lotus corniculatus            |                    | X           |       |             |
| Burnet; Salad (kg)<br>- Sanguisorba potiorum                        |                    |             | X     |             |
| Buttercup; Meadow (kg)<br>- Ranunculus acris                        |                    | X           |       |             |
| Campion; Red (kg)<br>- Silene dioica                                |                    |             | X     |             |
| Campion; White (kg)<br>- Silene latifolia                           | X                  |             |       |             |
| Carrot; Wild (kg)<br>- Daucus carota                                | X                  |             |       |             |
| Clover; Red (kg)<br>- Trifolium pratense                            |                    | X           |       |             |
| Cowslip (kg) - Primula veris                                        |                    | X           |       |             |
| Daisy; Oxeye (kg)<br>- Leucanthemum vulgare                         |                    |             | X     |             |
| Dandelion; Common (kg)<br>- Taraxacum officinale                    |                    | X           |       |             |

- Some species may be temporarily unavailable due to shortage of stock in the market place.
- Some species will perform better than others depending on micro-climate, soil types, moisture levels, etc.
- As with all wildflower mixes, a few species will come to dominate, as in nature.
